

When was the last time you changed liners or tubes?

Hygienic

Liners and tubes come in direct contact with your most valuable possessions every day. Are you willing to take risks with the health of your animals and milk quality?

Durable

DeLaval liners last up to 6 months or 2500 milkings. Tubes should be changed every year. All materials should be replaced as recommended in order to keep your milking equipment as efficient and reliable as the day it was installed.

Thoroughly tested

DeLaval puts years of research into developing its products. Every liner goes through our flex test 3 million times to ensure quality and high performance throughout their operational lifetime.
